                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 8
                                                                                               This is the nucleotide sequence of the Ara h 3 protein from Arachis hypogea. The Ara h 3 protein has 4 IgE (Immunoglobulin B) binding epitopes, one of which is immunodominant (AAY15281). By modifying the IgE binding sites the ability of the allergen to provoke an immune response is downregulated. The epitopes of the IgE binding sites can therefore be modified in genetically engineered plants and animals to elicit less of an allergic response. (Updated on 17-OCT-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention provides a tertiary structure for the peanut allergen Ara H in The Ara H is allergen is found to contain 23 linear 1gB-binding epitopes. The invention also provides an isolated recombinant peanut allergen designated Ara H 3 and a nucleotide molecule encoding the peanut allergen Ara H 3. Molecules of the invention are used to protect a host animal from allerger reaction, particularly using a modified allergen which is less reactive with IgE. The invention may also be used to ensure that the allergen is not introduced into genetically modified food. The present sequence represents a DNA encoding the Ara H 3 allergen.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a modified anaphylactic food allergen has an amino acid sequence that is substantially identical to that of natural anaphylactic food allergen, except for a cysteine residue that has been modified so that it cannot participate in the disulphide bond. The modified so that it cannot participate in the disulphide bond. The modified anaphylactic food allergen; (2) a method of making a modified anaphylactic food allergen; (2) a nucleotide molecule encoding or for causing a site specific mutation in the modified anaphylactic food allergen; (3) a transgenic plant or animal expressing the modified anaphylactic food allergen to a natural anaphylactic food allergen is useful for preventing or treating allerger; cand an isolated fragment of peanut allergen anaphylactic food allergen is useful for preventing or treating allergic reactions associated with any natural allergen such as food, insect, treating wounds in mammals such as bovine, canine, feline, captine, cornal, portion, mutating species. The spresent sequence is a CDNA cornal, and the species. The present sequence is a cDNA

The invention relates to a modified anaphylactic food allergen whose amino acid sequence is substantially identical to that of a natural canaphylactic food allergen. The natural anaphylactic food allergen in a disulphide includes at least one cysteine residue that been modified so that conformation, except that the cysteine residue has been modified so that it cannot participate in the disulphide bond. Also included are a method of making a modified anaphylactic food allergen, a nucleotide molecule conformation a modified anaphylactic food allergen, a transgenic plant or nucleotide molecule for causing a site specific mutation in a gene conformation and anaphylactic food allergen, a transgenic plant or animal expressing a modified anaphylactic food allergen defined above, a conformation and individual by reducing the clinical response to a natural anaphylactic food allergen by administering a modified or anaphylactic food allergen is consecutive amino acids of ADG27464 or ADG27465. About 10-17% of the amino acids have been modified in at least cone IgE epitopes recognised when the natural anaphylactic food allergen is contacted with serum IgE from individual(s) allerger to the natural anaphylactic food allergen and consecutive and consecutive allergen allergen and an isolated fragment of the invention consecutions or consecutive and their encoding consecutives beant allergen and an isolated fragment of the invention discloses Peanut allergens Ara h), Ara h3 (and their encoding consecutions). Soybean Glycinin A2Bla and IgE-binding epitopes of the English and allergen and an individual sequence are anaphylactic good allergen would be an anaphylactic food allergen by a modified anaphylactic food allergen by an under the matural anaphylactic food allergen walnut allergen by an under the anaphylactic food allergen by a modified anaphylactic food
                                                                                                                                                                                                                                         King NE, Kopper RA, Maleki SJ;
                                                                                                                                                                                                                                                                                                                                     New modified anaphylactic food allergen comprising a cysteine residue which has been modified so that it cannot participate in the disulfide bond, useful for treating allergic reactions or wounds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1 CGGCAGCAACCGGAGGAGAACGCGTGCCAGTTCCAGCGCCTCAATGCGCAGAGACCTGAC

The sequence represents the coding sequence of anaphylactic antigen Ara h 3. Ara h 3 is an anaphylactic antigen (A), which was used to design antigenic peptides having a reduced ability to bind immunoglobulin E (1gE) as compared with the intact (A), or having a sequence substantially identical to a portion of sequence of an antigen that includes at least one IgE binding site, where at least one IgE binding site of the peptide is altered. The antigenic peptides are used in a composition which is useful for reducing risk or severity of allergic reaction to an antigen. This is done by identifying an individual at risk of allergic reaction to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Antigenic fragments useful for reducing anaphylactic risk and reducing the severity and/or number of allergic symptoms in individuals sensitive to antigens, have reduced ability to bind Immunoglobulin E.

an antigen by identifying prior display of allergic symptoms when exposed to the antigen, or a familial relationship with an individual who previously displayed allergic symptoms when exposed to the antigen. Following this an antigen-specific log present on one or more mast cells or basophils in the individual's serum is identified. The individual is then contacted with a peptide corresponding to a portion of the antigen, which is selected, formulated, and delivered so that binding of the peptide to antigen-specific 1gE is reduced as compared with 1gE binding of intact antigen. The composition is also useful for treating and

                                                                                                                                                                                                                                                                                                            ઠે
                                                                                                                                                                                     The present sequence is that of peanut allergen Ara h3 cDNA. A portion of the Ara h2 gene coding region is homologous to the corresponding region of the peanut allergen Ara h4 gene. This region has been PCR amplified, cloned in transformation vectors (pUCI8 and pB14434) in sense and antisense orientations and used to down-regulate Ara h3 and Ara h4 allergens in peanut. This is an example of the method of the invention, which relates to the production of a peanut plant having reduced, or undetectable, allergenic protein (AP) content in its seed, A peanut plant cell is transformed with a DNA construct containing an antisense AP gene and/or sense AP gene, or their fragments, regenerated to plants, and fertile transgenic plants that produce seeds with reduced AP content are identified. The seeds are useful for preparation of allergen-free foods. (Updated on 11-SEP-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence represents the coding sequence for the Gy3 subunit of the soybean seed protein, glycinin. The method of the invention is for reducing the quantity of a soybean seed storage protein (A), such as beta conglycinin, in soybeans. It comprises: (a) constructing a chimeric gene comprising: (i) a nucleic acid fragment encoding a promoter that is functional in the calls of soybean seeds; (ii) a nucleic acid fragment encoding all or a portion of (A) placed in sense or antisense orientation relative to the promoter of (1); and (iii) a transcriptional termination conforms (a) the promoter of (1); and (i) growing the transgenic soybean cell the chimeric gene of (a); where the quantity of one or more members of the chimeric gene of (a); where the quantity of one or more members of a chase of (A) subunits is reduced when compared to soybeans on containing the chimeric gene of (a); where the expression of genes encoding (A) are modulated to soybean lines where the expression of genes encoding (A) are modulated to effect a change in seed storage protein profile of transgenic plants.

Modification of novel soy protein profile can result in the production of novel soy protein profile can result in the profile of transgenic plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ç
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              124

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a new Glycinin characterised by the atomic coordinate data fully defined in the specification. The structure can be used for improving processability of soya protein. The present nucleic acid sequence encodes the Glycine max (Soybean) var. Dare protein, as described in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               64
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             protein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               proglycinin, their crystal structures, three dimensional structured and models

This invention describes a novel method for reducing the expression of least two different endogenous target genes in a eukaryotic cell or organism by introducing an RNA molecule that is at least partly double stranded. The transcribed RNAs from at least two target genes have homology below 90% and the RNA molecule is formed as a single, self-complementary molecule. At least one of the double-stranded structures

```
Control to the RNA molecule may include an intron-encoding sequence. At least two target genes are selected from different classes of storage protein genes, i.e. 25 albumen, 75- or 118/125-globulins or zein-

protein genes, i.e. 25 albumen, 75- or 118/125-globulins or zein-

protein genes, i.e. 25 albumen, 75- or 118/125-globulins or zein-

protein sequences or genes in the homogentistate metabolic pathway or cervity transacylases, thioseterases, (de)branching enzymes types. Genzyme types, e.g. acetyl transacylases, thioseterases, (de)branching enzymes or cellulases. The RNA of the invention, also related cassettes, expression systems, vectors and transgenic organisms are used for preparation of pharmaceuticals, in biotechnological processes and plant confectionly, specifically in plants to improve protection against confection catress, to modify carbohydrate composition, to alter colour or pigmentation, to reduce content of storage proteins, to increase abiotic strass, to modify carbohydrate composition, to alter colour or pigmentation, to reduce content of storage proteins, to increase content of pathogens, to inhibit stem break, to delay fruit ripening or resistance to pathogens, to inhibit stem break, to delay fruit ripening or aging, to induce male sterility, to reduce content of toxic or unwanted components, to modify lightication and/or lighin content, to susceptibility to shock, to increase synthesis of Vitamin E, to reduce contents of nicotine, caffeine or fibophylline and to increase methionine and efficient way of reducing gene expression, can inhibit more then or traget gene, prevente development of multiple phenotypes (since the traget gene, prevente development of multiple phenotypes (since the effective suppression of all target genes), avoids problems of epigenic condition, the method can be applied to plants with complex (polyploid) genomes. On interference between the individual RNA sequences or and the method can be applied to plants with a topic or a target gene is ilenging.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    130
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        124

This invention describes a novel method for increasing the total oil

content of a plant by reducing the amount of at least one storage protein

to the plant (or its tissue, organs, parts or cells) and selecting plants

that have higher total oil content than starting plants. The storage

that have higher total oil content than starting plants. The storage

protein is suppressed by introducing antisense RNA, optionally combined

with a ribozyme, sense RNA that induces co-suppression. DNA-binding

factors directed against storage protein genes, viral sequences that

degrade storage protein RNA, constructs that induce homologous

combination of endogenous storage protein genes or mutations into

storage protein genes. Most preferably a plant cell is stably transfected

with a recombinant expression construct, then regenerated to plants that

express the incorporated sequence. The expression constructs particularly

contain a seed-specific promorer and they are introduced into plants by

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    724
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  784
           improving plant tolerance to cold, heat, drought, herbidges, extreme osmotic conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, lignin or plant growth regulators, for increasing the rate of homologous photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This sequence represents a plant full length insert polymucleotide that can be used in the recombinant DNA construct of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         304
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       364

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention describes a recombinant DNA construct comprising a polymucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent Office at the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme csenditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing glactomannan, lignin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one content. This sequence represents a plant full length insert content. This sequence represents a plant full length insert of the polymucleotide that can be used in the recombinant DNA construct of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New recombinant DNA construct, useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for conferring increased resistance to plant disease, or for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   164
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         224

The invention describes a recombinant DNA construct comprising a polynucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at the polynucleotide consisting of a sequence encoding an amino acid sequence. The sequence in the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing glactomannan, lighin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of the cell cycle by modification of the cell cycle pathway. For conferring increased resistance to plant disease, for producing galactomannan, lighin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, introgen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one stream of the modifying seed oil or procein yield and/or content. This sequence represents a plant full length insert procein the proportion of the polynucleotide that can be used in the recombinant DNA construct of the
                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                           New recombinant DNA construct, useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens pests, for conferring increased resistance to plant disease, or for

The invention describes a recombinant DNA construct comprising a polynucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at amino acid sequence the sequence. The performance of the invention are also useful in physical arrays of molecules and as plan to breading markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme cosmotic conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, lighin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of the photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one stream of the cell or protein yield and/or content. This sequence represents a plant full length insert content of the cell or protein yield and/or polynucleotide that can be used in the recombinant DNA construct of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New recombinant DNA construct, useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for conferring increased resistance to plant disease, or for

R6 stage were collected from different plants, and placed into liquid N2 immediately and stored in -800C freezer. Total RNA was isolated with TRIZOL-Reagent ultrapure (GIRCOREL). mRNA was extracted and purified from total RNA (Promega). cDNA synthesis and library construction followed the protocol of by ZAP-cDNA Gigapack III Gold cloning kit (Stratagene). The cDNA above 500bp were collected after size-fraction. The inserts were
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1050

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 450
                                                                                                                                                                                                            directionally cloned into Unitary XR vector using XhoI EcoRI sites adapters. The lamda library was packed into phages using Gigapack III Gold (Stratagene). The un-amplified library was used to excise pBluescript phagemids from the Unitary XR vector, and the phagemids was used to transform the host bacteria SOLR. The library was constructed by Dr. Meng Luo and Dr. Phat Dang."

(UIPP) (ADDA IDEAD YR, Site 1: ECORI; Site 2: XhoI; CONA library was constructed from peanut cultivar Al3 (NOVINTARA) as a resistance to Aspergillus infection and drought tolerance. The immature pods that developed to R6 stage were collected from different plants, and placed into liquid N2 immediately and stored in -800C freezer. Total RNA was isolated with TRIZOL-Reagent ultrapure(SIBCOBRI). mRNA was extracted and purified from ultrapuretion followed the protocol of by ZAP-CDNA Gigapack total RNA (Promega). cDNA synthesis and library construction followed the protocol of by ZAP-CDNA Gigapack III Gold cloning kit (Stratagene). The cDNA above 500bp were collected after size-fraction. The inserts were directionally cloned into Unit-ZAP XR vector using XhoI ECORI sites adapters. The lamda library was packed into phages using Gigapack III Gold (Stratagene). The un-amplified library was used to excise pBluescript phagemids from the Unit-ZAP XR vector, and the phagemids was used to transform the host bacteria SOLR. The library was constructed by Dr. Meng Luo and Dr. Phat Dang."

/OCCE="Vector: Uni-ZAP XR; Site 1: ECORI; Site 2: XhoI; CDNA library was constructed from peanut cultivar Al3 (NCVIIXARA). Al3 has resistence to Appergillus infection and drought tolerance. The immature pods that developed to R6 stage were collected from different plants, and placed into liguid N2 immediately and stored in -80oC freezer. Total RNA was isolated with TRIZOL-Reagent ultrapure(GIBCOBRI). mRNA was extracted and purified from total RNA (Promega). cDNA synthesis and library construction followed the protocol of by ZAP-CDNA Gigapack III Gold cloning kit (Stratagene). The cDNA above 500bp were collected after size-fraction. The inserts were directionally cloned into Uni-ZAP XR vector using XhoI ECORI sites adapters. The lamma library was packed into phages using Gigapack III Gold (Stratagene). The un-amplified library was used to excise pBluescript phagemids from the Uni-ZAP XR vector, and the phagemids was used to transform the host bacteria SOLR. The library was used to transform the host bacteria SOLR. The library was constructed by Dr. Meng Luo and Dr. Phat Dang."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1011
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         176
